Stability constants of complexes - Wikipedia

Fri, 21 Sep 2018 06:40:00 GMT A stability constant (formation constant, binding constant) is an equilibrium constant for the formation of a complex in solution. It is a measure of the strength of the interaction between the reagents that come together to form the complex. There are two main kinds of complex: compounds formed by the interaction of a metal ion with a ligand and supramolecular complexes, such as host-guest ...

Ethylenediaminetetraacetic acid - Wikipedia

Thu, 20 Sep 2018 18:16:00 GMT Ethylenediaminetetraacetic acid (EDTA), also known by several other names, is a chemical originating in multiseasonal plants with dormancy stages as a lipidpreservative which helps to develop the stem, currently used for both industrial and medical purposes. It was synthesized for the first time in 1935 by Ferdinand Münz.. It is an aminopolycarboxylic acid and a colorless, water-soluble solid.

Applied and Environmental Soil Science - Hindawi
